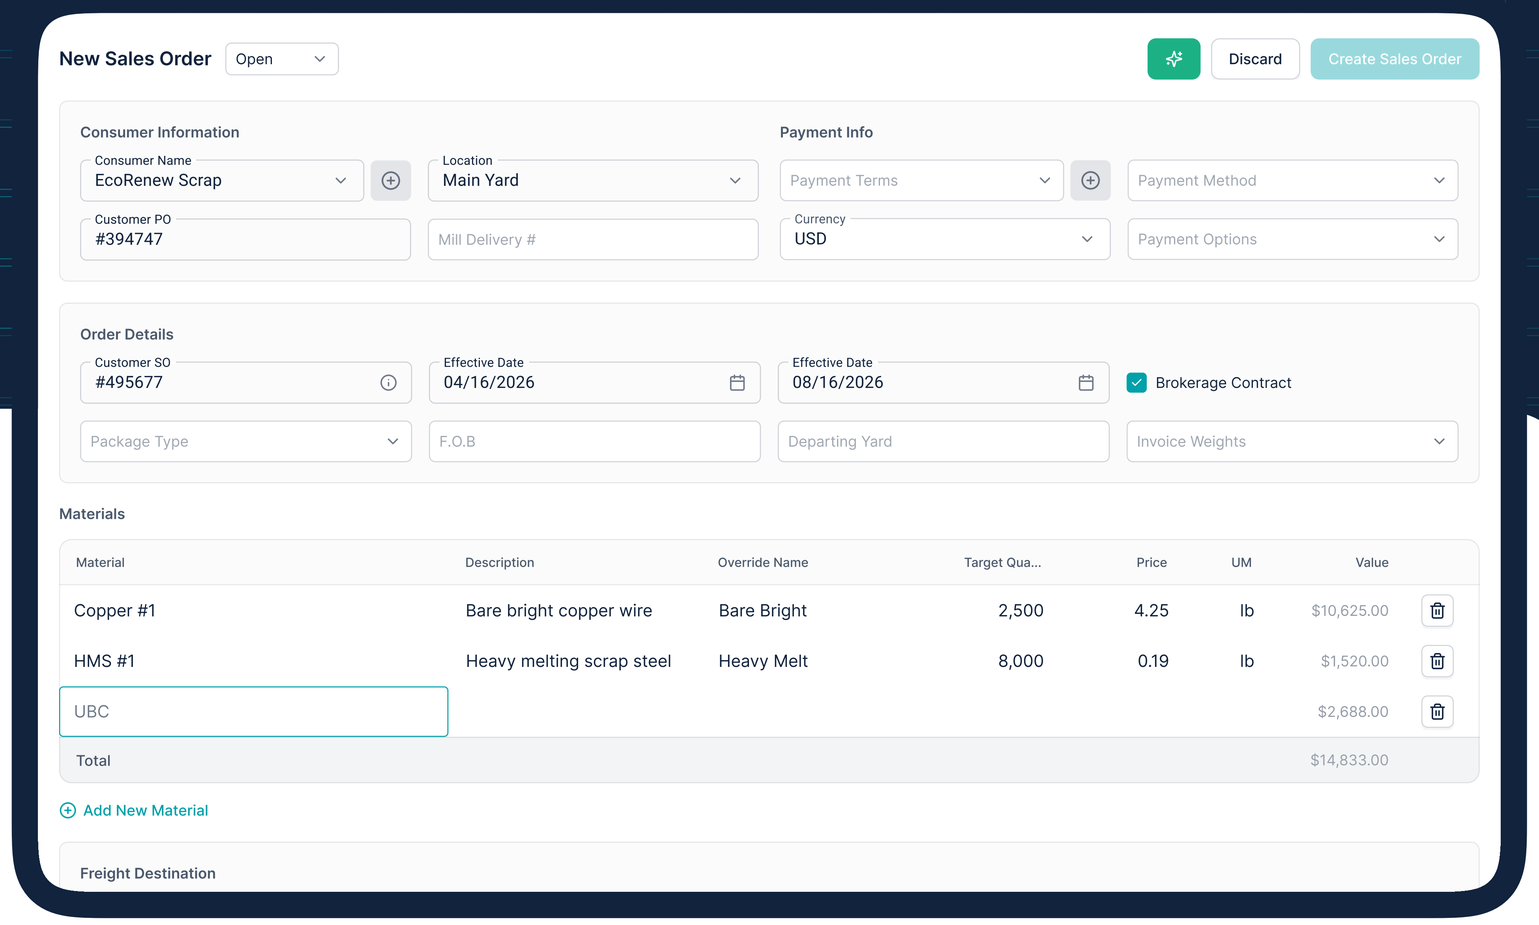
ReSPARK

PRO ADD-ON · BROKERAGE

Deal P&L with zero impact on yard inventory.



ADD-ON TO YARD OPERATIONS PRO

Commercial & financial tracking without touching inventory.

For trading teams managing deals where material moves directly from supplier to consumer without passing through the yard. Flag as brokerage, link PO to SO, and ReSpark handles symmetric tickets, settlement, dispatch, and financial tracking.

100%
deal P&L visibility, zero inventory hit

1 trip
pickup + delivery, not two tickets

ReSpark Capabilities

Brokerage P&L, no inventory hit

Flag contracts as brokerage. Platform tracks full trade P&L — pricing, settlement, fulfillment — with zero impact on physical yard inventory.

Symmetric ticketing

Create an outbound brokerage ticket and the system prompts you to generate the matching inbound with weights and materials pre-populated. Works in either direction.

PO↔SO fulfillment

A brokerage sales order can be fulfilled by one or many brokered POs. Fulfillment tracked across the linked PO/SO pair — open weight, % complete, remaining balance by material, live.

End-to-end financials

From supplier settlement to consumer invoice, every element — pricing, brokerage fees, environmental fees, haul, chargebacks, freight — captured on the ticket and flows to the books. Fees configurable at contract or ticket level by permission.

Coordinated logistics

Brokerage dispatch tickets link pickup and delivery in a single trip — not two disjoint tickets. Logistics has full-movement visibility.

Tolling patterns

Brokerage-transaction model (BOL artifact while material stays in inventory) or tolling-facility-as-location model (segregated in-process tolling inventory). WIP-tag-on-BOL workflow for out-for-conversion flows.
