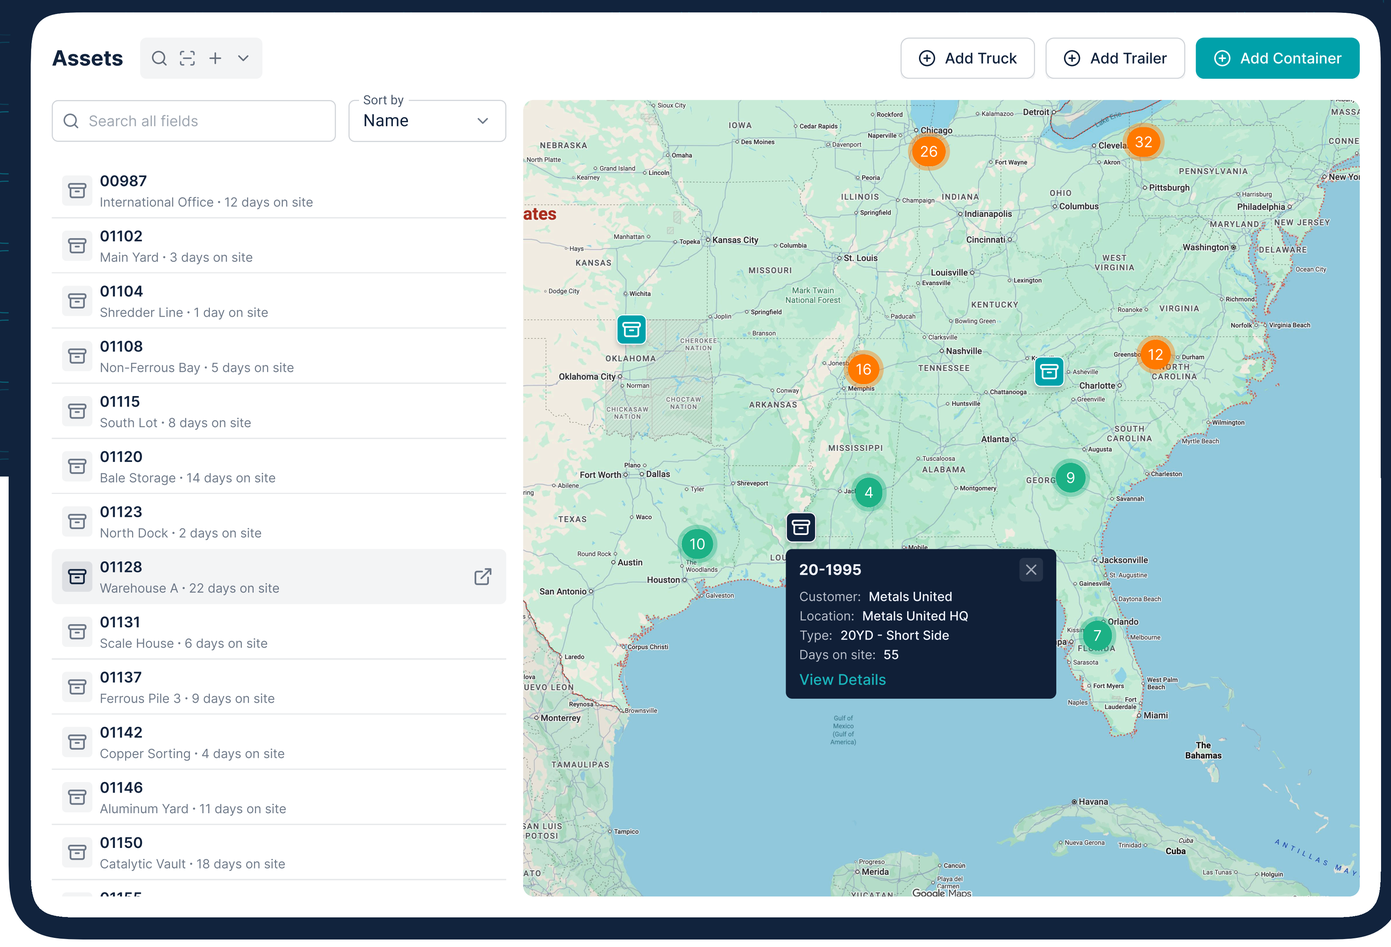
ReSPARK

LOGISTICS · DISPATCH

From yard floor to month-end close.



STANDALONE OR AS YARD OPS ADD-ON

Every truck and container on one live board.

Container and asset management, load-board dispatch, mobile driver app, and a tight hand-off to the scale house — dispatched trips pre-fill the scale ticket header at the gate. Available standalone or as an add-on.

ReSpark Capabilities

Container & asset map

Every deployed and in-yard container by location, with customer, type, and days-on-site. Real-time updates from trip completions — no manual check-ins, no spreadsheet reconciliation.

Utilization & turnover

Days-on-site tracking with utilization metrics by customer and container type. 'Bins at customer over 90 days' report routes to specific account managers every Monday.

Load board

Drag-and-drop assignment, per-location or organizational views, color-coded statuses, recurring trips (daily/weekly/monthly/custom), unassigned parking lot. Every trip type supported — pickup, drop-off, exchange, pick-and-return, live load, delivery, re-sort.

Mobile driver app

Guided trip workflow (depart yard → arrive site → service → depart site → return). QR/barcode pickup, photo + signature capture, geofenced arrive/depart, one-tap directions and customer calling.

Dispatch-to-scale integration

At the scale, click 'link dispatch ticket' — driver, truck, trailer, carrier (kicking off the freight payable workflow), customer, and location all pre-fill. Eliminates double entry.
