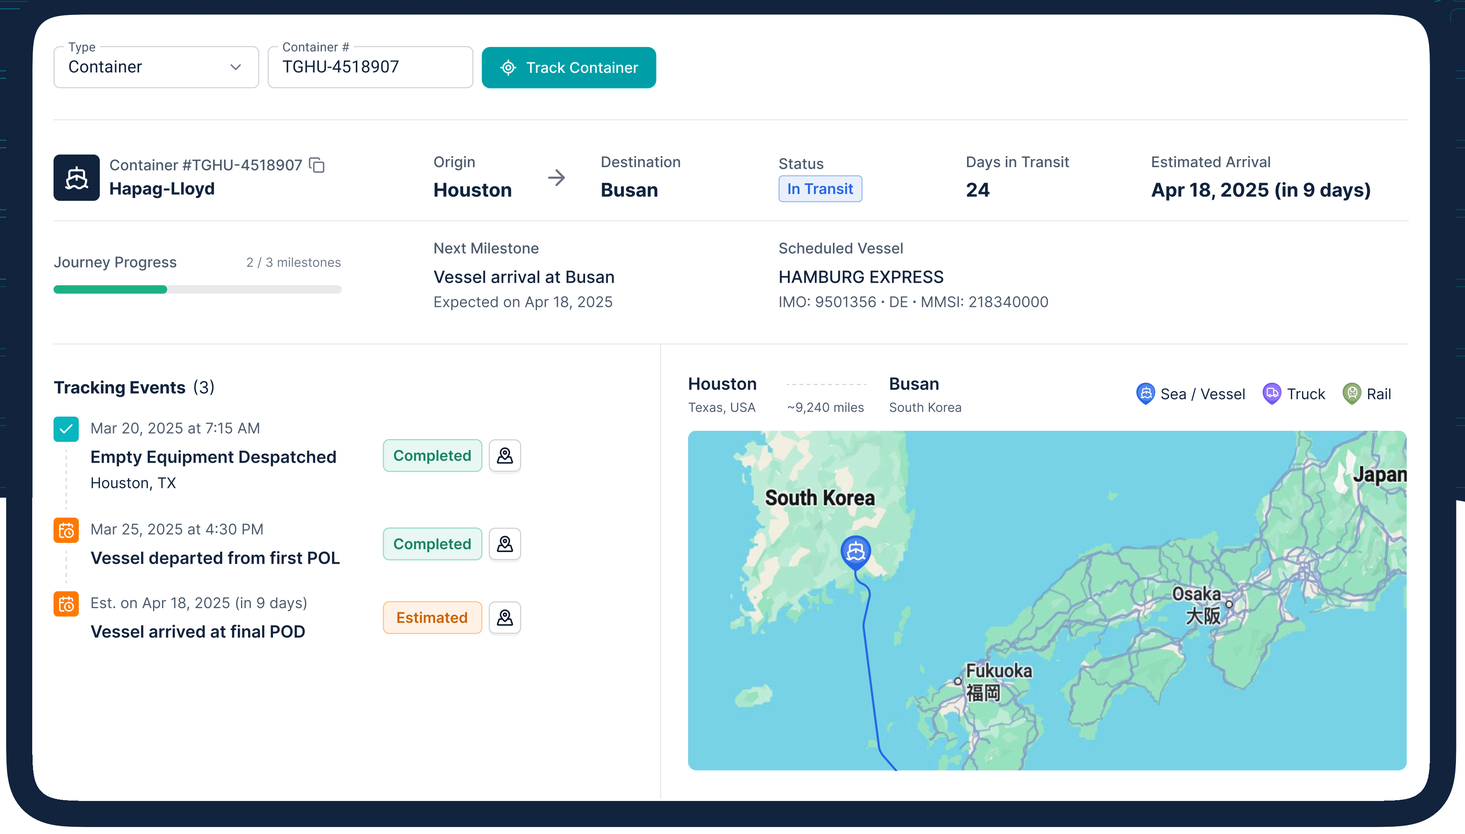
ReSPARK

LOGISTICS · EXPORTS

End-to-end exports without the spreadsheet shuffle.



STANDALONE OR AS YARD OPS ADD-ON

Export documentation + ocean container tracking.

Live container tracking, ocean lane management, and shipment milestones — all within your scrap platform. No WhatsApp photo chains, no portal hopping, no double entry.

Up to 45
container photos, on the ticket

1 platform
booking → BOL → delivery

ReSpark Capabilities

Sales contracts for export

Incoterms, port of loading/discharge, final consignee, notified party, country of destination — via UN port codes. Metric tons and kilograms as first-class units. AI Contract Upload parses POs directly into export fields.

Appointments & bookings

Combined object — shipping line/forwarder, ERD dates, cutoffs, ETD/ETA, document cutoffs, vessel name, voyage, container count/types. Start shipments directly from the appointment calendar.

Outbound shipments

Bulk-add finished goods via scan. Up to 45 images per shipment directly on the ticket — empty container, quarter-full, half-full, three-quarter, full, seal on. Replaces the WhatsApp / Google Drive / SharePoint shuffle.

Document packs

Pre-created and pre-loaded by destination country. Scan-through before print flags missing fields. One-click email of BOLs, packing lists, and selected photos to consignees, forwarders, or shipping lines.

Ocean lanes & rates

Port-to-port OD pairs by shipping line with equipment, material category, Incoterms, and active + upcoming pricing. Per-container, per-ton, or flat-rate. Rates flow automatically to outbound tickets.
