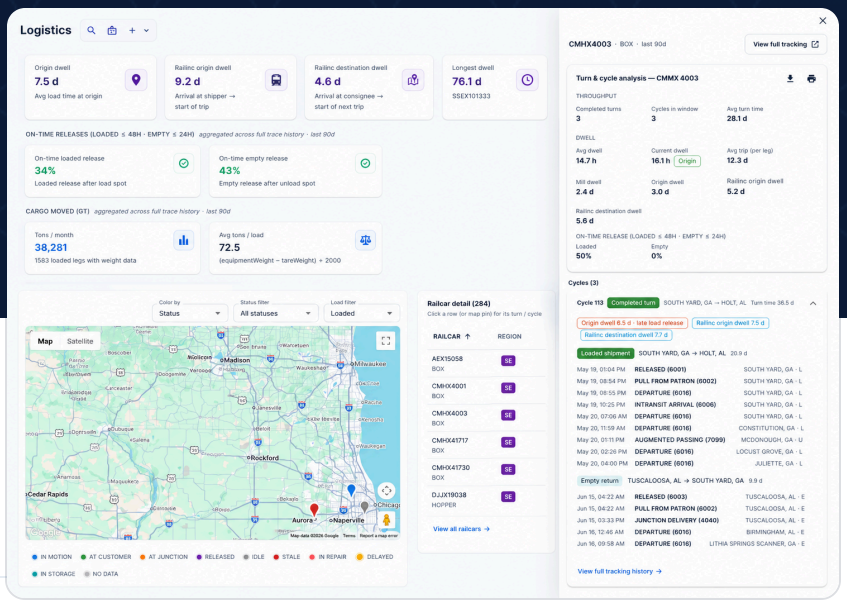
ReSPARK

RAIL TRACKING

Rail tracking, built into operations.

Know where every railcar is, how your fleet is performing, and what it's costing you. ReSpark brings rail tracking directly into your operations platform—so every movement connects to customers, shipments, inventory, and financials.



Live fleet map, executive utilization dashboards, and per-railcar turn & cycle analysis—in one view.

Everything rail, connected to your business.

01 **Complete rail visibility** — live locations, full movement history, and waybills across owned, leased, and third-party cars.

02 **Executive performance dashboards** for turns, fleet utilization, dwell, regional performance, status, and trends.

03 **Dwell measured from loss of control** — not when a car is finally pulled—so you recover availability faster and protect cash flow.

04 **Rail connected to operations** — scale tickets, customers, inventory, orders, contracts, dispatch, and accounting.

05 **Built for large scrap fleets** running private and leased cars across multiple facilities and rail, truck, and ocean shipments.

WHY RESPARK?

- ✓ Live railcar tracking
- ✓ Executive utilization dashboards
- ✓ Accurate dwell calculations
- ✓ Fleet performance analytics
- ✓ Waybill management
- ✓ Integrated transportation data
- ✓ One platform for rail, trucking, dispatch, operations & finance

Built for large scrap operations

Whether you operate dozens or thousands of railcars, ReSpark helps transportation, operations, and finance work from the same data.

- Private rail fleets
- Leased railcars
- Multiple facilities
- Regional operations
- Rail, truck & ocean shipments

ONE PLATFORM. ONE SOURCE OF TRUTH.
