ReSPARK

SALES@RESPARK.COM

ReSpark API.

Your data is yours. Pull it into any system you run. The ReSpark API gives your team structured, programmatic access to your operational data—customers, tickets, transactions, and inventory today, with new entities added continuously. Standard REST, documented endpoints, and API keys scoped to your organization or to individual yards.

What you can build

Accounting integrations
Feed ERPs and accounting systems beyond ReSpark's native connections.

Corporate roll-ups
Consolidate multi-yard data into parent-company reporting.

Data warehouses & BI pipelines
Schedule clean, structured feeds into your own data environment.

CRM sync
Read and write customer records to keep platforms like Salesforce aligned with ReSpark.

Automated data feeds
Retire manual CSV exports and replace them with a real, scheduled feed.

How it works

- ✓ Standard REST with documented endpoints and API key authentication
- ✓ Keys scoped to the org or yard level, with token-level scoping to specific data
- ✓ Real-time data on a pull basis, with full historical access
- ✓ Pull at the org level and filter by yard, or pull directly per yard
- ✓ Read access across supported entities, plus customer writeback for CRM
- ✓ Covered by SOC 2 and the same SLA as the core platform
- ✓ Minor releases are backward compatible; breaking changes ship with 2 weeks notice

Good to know

You own the destination. ReSpark delivers clean, structured data with field definitions and best practices. Your team or integrator decides how it maps into your systems.

Already on QuickBooks, Xero, NetSuite, Dynamics 365 or Sage Intacct?
Those accounting integrations run natively in ReSpark. No API work required.

Built on the platform you trust
Part of ReSpark's SOC 2 program, backed by the same SLA as the core platform.

FAQ

Can I pull historical data?
All of it. Historical data is available from day one.

Is the data real time?
Yes—the API serves live data on a pull basis.

What if something breaks?
If a ReSpark-side change causes an issue, our team resolves it with you. Your own pipelines are owned by your team or integrator.

How is it priced?
A platform add-on with flat, org-level pricing and fair-use limits. No per-call metering.
