ReSpark Trade

Buy the freight. Sell the cargo. Move the shipment. Settle the money.

From containers to bulk, ReSpark Trade keeps the entire transaction in one workflow. AI handles the paperwork in between — reading what comes in and drafting what goes out.

Too many systems. One trade.

One trade can touch a trading platform, carrier portal, ERP, inbox, and a handful of spreadsheets.

The same information gets entered three or four times. Contracts, shipping details, invoices, container numbers and settlement data are copied from system to system — while the documents that actually prove what happened arrive as attachments and get re-keyed by hand.

Everything connected.

Bulk or containerized, it's still a trade. ReSpark Trade keeps the entire transaction connected in one record — contract, credit, freight, cargo, documents, settlement and payment.

One operational backbone. One source of truth. And one place for AI to read, write, and move the work forward.

AI BUILT INTO THE WORKFLOW

Reads what comes in

LC advices, recaps, NORs, surveys, bills of lading, outturns, rate sheets and carrier invoices are parsed as they arrive, matched to the right trade, and proposed as field-level updates.

Drafts the work

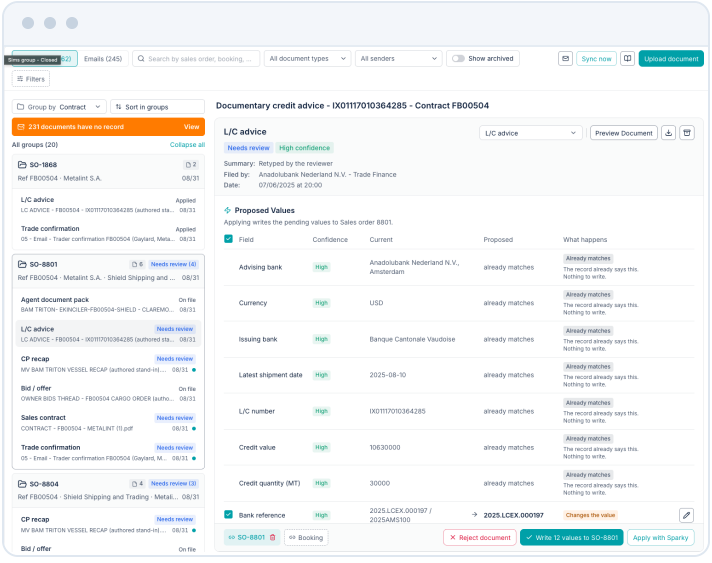

Sparky turns trade data and plain-English instructions into stowage plans, fulfillment plans, settlement reconciliations, and even complete workflows.

Creates what goes out

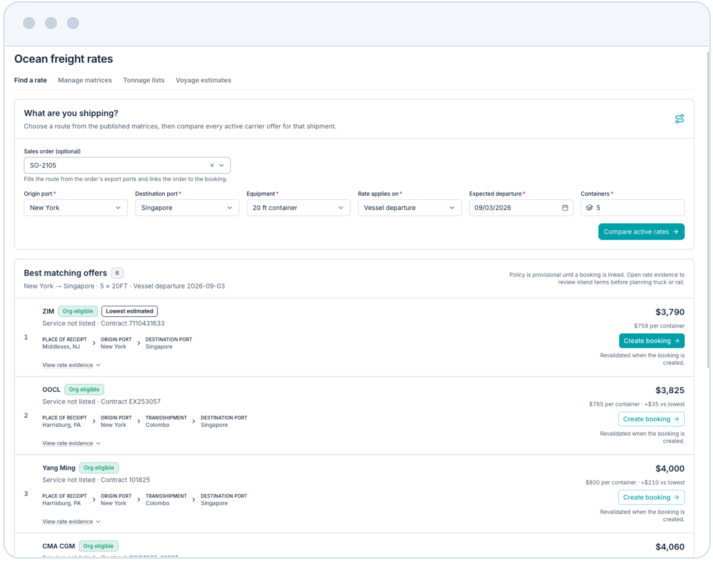

Shipping instructions from closed tickets. Declarations from captured weights and codes. Laytime and demurrage calculated. Carrier invoices audited against the agreed rate.

Keeps you in control

Every parsed field links back to its source. Nothing writes without approval. Missing information stays blank instead of being guessed. Every action is captured in the audit trail.

PARSED DOCUMENTS ARRIVE AS PROPOSED VALUES — REVIEWED, THEN WRITTEN TO THE RECORD

EVERY ACTIVE CARRIER OFFER ON THE LANE, COMPARED BEFORE YOU BOOK

respark.com/demo

Bulk, planned and proven.

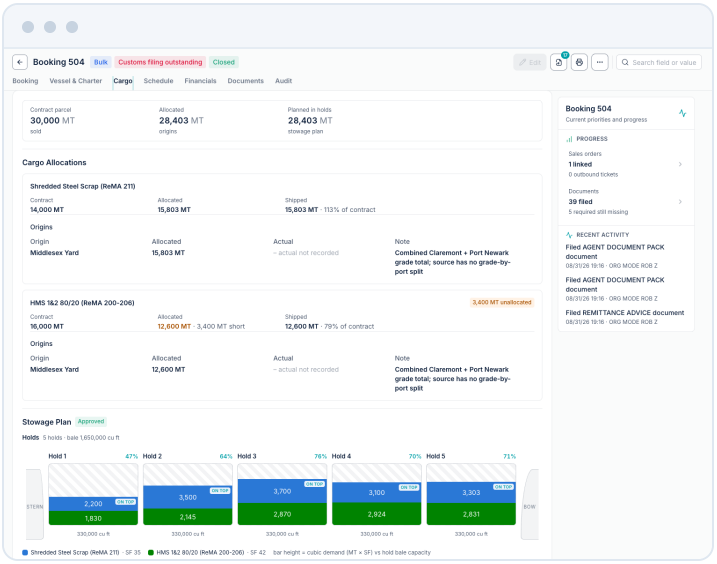

Charter party, nominated vessel, cargo allocations and the stowage plan sit on the same booking — **planned tonnage reconciles against what each hold can actually take.**

Laytime and demurrage calculate from the events on file, so the money follows the voyage instead of a spreadsheet.

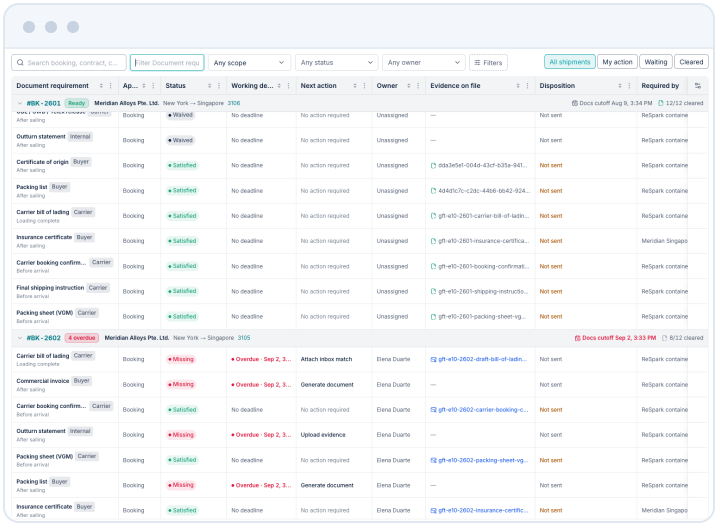

One document desk.

Every requirement across every shipment in one view — **what's satisfied, what's overdue, who owns it and what the next action is.**

Generate what's needed, waive what isn't, then send or zip the set.

CARGO ALLOCATIONS AND HOLD-BY-HOLD STOWAGE PLAN

EVERY REQUIREMENT, ITS EVIDENCE AND ITS NEXT ACTION

EVERYTHING THE TRADE NEEDS, ALREADY CONNECTED

Trade & contracts	Trade capture · contracts · clauses · approvals · commodity master · credit
Freight & fulfillment	Bulk & containerized · export desk · ocean rates · rate freeze · chartering · stowage · container lifecycle · laytime · demurrage
Documents & AI	Document parsing · Sparky · document engine · document packs · workflow builder · automated document generation
Finance & settlement	LCs · deposits · credit ledger · provisional settlement · final settlement · carrier invoice audit · reconciliation
Connectivity & control	Carrier integrations · ERP integrations · yard system feeds · tracking · filing · e-signature · permissions · full audit trail
